

NEW!

Model 2275 Maxi-Shear™ Flush Cutter

Cleanly cut cable ties and wire faster and easier

Introducing a new Maxi-Shear™ Flush Cutter, designed for rapidly and cleanly cutting cable ties, soft wire and soft plastics.

Featuring patented Micro-Shear® blade bypass cutting technology, the model 2275 leaves cut ends square and straight, with no "pinch." And each smooth, square-cut requires only about half the cutting force, as opposed to traditional compression cutters.

Working in tight spaces with limited visibility? Then you, especially, will appreciate that the Xuron® Model 2275 Maxi-Shear™ Flush Cutter eliminates the need for pre-positioning before cutting. It boasts full cutting capacity along the entire length of its blades, offering an unrestricted cutting surface.

The model 2275, like all Xuron® tools, has been ergonomically designed to fit your hand comfortably with soft Xuro-Rubber™ cushioned hand grips and a Light-Touch™ return spring for ease of use. Optionally available with static control (AS) Grips.

As the newest addition to the line of Maxi-Shear™ Flush Cutters, the model 2275 incorporates the benefits of Micro-Shear® blade bypass cutting with the advantage of an unrestricted cutting surface for quick, easy cutting and excellent results.

Specifications:

Cutting Capacity: Up to 12 AWG (2mm) soft material
Length of Cutting Surface: 0.600 (15mm)
Weight: 3 oz. (85g)
