

XURON's ESD-Safe Hand Tools Can Be Part Your ESD Program

Static electricity is not a friend to PCB manufacturers. Static can cause latent and/or catastrophic failure to the PCB.

Protecting against static damage means using proper grounding devices, protective clothing and hand tools with grips made from material that will not generate a charge.

All XURON® brand Micro-Shear® Flush Cutters, Pliers, Scissors and Wire Strippers are optionally available with ESD-Safe Hand grips.

Specifications:

- Grip material conforms to ANSI/ESD.S20.20 and DOD-HDBK-263
- Surface Resistivity of 10 (6) – 10 (9) ohms
- Grip Material is both REACH and RoHS compliant

62 Industrial Park Road, Saco, ME 04072
